

Setting up your Cubelite Light Table Kit

1. Remove items from the box. You should have:

- Bag containing the Light Table (flat)
- 4 x Black support rods
- Circular acrylic sheet
- Roll of translucent film
- Tungsten light head
- Mains lead for the light head
- Reflector for the light head
- 500w bulb
- Backlight stand and riser

Remove the Light Table from the protective bag.

2. Lay the Light Table on the floor and position the end of one of the rods on the corner of the lower steel rim. Ensure the steel rim locates into the jaws of the tip at the end of the rod.
3. Pull the two steel rims away from each other and locate the jaws of the tip at the other end of the rod into the upper rim.
4. Repeat steps 2&3 for the remaining three corners. When all four rods are in place, check they are all in a vertical position.
5. Place the circular acrylic sheet on the top of the Light Table structure. (Take care not to drop this sheet as it will break).
6. The Light table is now complete.
7. Place your Cubelite on top of the Light Table and set up the internal silver/white reflector and the external tungsten light (which came as part of your Cubelite kit) as per the separate Cubelite kit instructions. Instead of attaching the white vinyl background that came with the Cubelite kit, attach the translucent film that came with the Light Table kit. This will allow the light from the Cubelite Light Table to shine through.
8. Assemble the Tungsten light head, which came with the Light Table kit in the same way as the light head that came as part of the Cubelite kit.
9. Rotate the three legs of the floor stand so that they 'fan' out to an equal distance apart.
10. Slot the riser into the stand and tighten the thumb screw. The riser can be extended (if required) by releasing the thumb screw on the riser, extending the tube, then re-tightening the thumb screw.
11. Attach the light head to the top of the stand/riser and secure using the thumb screw. You must remove the plastic protector cap from the top of the riser first.
12. Position the tungsten light head at the base of the rear opening of the Light Table. The light can be pointed downwards or upwards. Experiment with different positions to see the effect it has on the light. Refer to the label near the rear opening of the Light Table for advice on how to position the light.
13. Your Cubelite Light Table is ready to use.

Breaking Down your Cubelite Light Table kit.

14. Remove the translucent film, roll it up and return it to the protective tube.
15. Remove the Cubelite from the top of the Light Table and pack it away as per the instructions that came with the Cubelite kit.
16. Allow the lights to cool until it is safe to touch them. Remove from the stands and store them as required.
17. Close up the stands to their smallest size.
18. Remove the circular acrylic sheet from the top of the Light Table and return it to the protective bag.
19. Remove the supporting rods from the Light Table and allow the two steel rims to lie on top of each other. Return them to the protective bag.
21. Return all the items to the storage box.
